	Brief description:	<p>Despite the advances of science and technology, natural risks are still resulting in dramatic human and economical consequences in the world's most vulnerable regions for the natural and built environment as well as for the cultural heritage. The capacity to mitigate the impact of risks relies on implementation of research and technology results into policy. Mitigation practices are more effective if incorporated into academic research and higher education curricula in an international and global context, representing an important opportunity for promoting innovation, creation of new jobs, international cooperation and dialogue. Objective of this project is to establish higher education cooperation between institutions across Europe and Latin America, through academic mobility measures in natural risk reduction and preservation of the cultural heritage. Researchers, future policy makers and practitioners will strengthen their curricula in architecture, engineering, geological sciences, environmental sciences, management and planning, etc. Specific educational and interdisciplinary research activities will focus on innovative practices in: conservation of the cultural heritage, life-cycle analysis and resilient/sustainable design, health monitoring and diagnostics, seismology, experimental studies, social/economical impact evaluation, disaster and asset management, national and international policy. Cooperation will take place between universities and research centers active in protection of the cultural heritage, environmental risk mitigation and training. Mobility will involve 36 Undergrads, 32 Masters, 23 PhDs, 17 Post-Docs, and 11 Staff. Universities, NGOs, Industry and Philanthropy groups, local and International Authorities will develop a human resources infrastructure incorporating credit recognition, joint degrees, UNESCO chair charters, innovative E-learning platforms, field case-study laboratories, cultural policy strategies, social and cultural inclusion.</p>
